1. (Twice Amended)

1

A polymer complex for entrapping drug granules comprising:

a complex of polyvinyl acetate phthlate (PVAP); and

polyvinylpyrrolidine (PVP);

said PVAP-PVP complex having bands at about 1657 cm⁻¹ and 1724 cm⁻¹ in the spectrum of the PVAP-PVP complex.

8. (Twice Amended)

A polymer-entrapped drug comprising:

a drug that is insoluble in organic solvent, but soluble or suspendable in an alkaline solution and insoluble in aqueous acidic solutions;

a complex of polyvinyl acetate phthlate (PVAP); and polyvinylpyrrolidine (PVP);

said PVAP-PVP complex having bands at about 1657 cm⁻¹ and 1724 cm⁻¹ in the spectrum of the PVAP-PVP complex.

19. (Twice Amended)

A method of making a polymer entrapped drug comprising the steps of:

combining polyvinyl acetate phthlate (PVAP) and polyvinylpyrrolidine (PVP) in a non-acidic

medium selected from the group consisting of an aqueous alkaline solution and an

organic solvent to form a PVAP-PVP complex,

adding a drug to the aqueous alkaline solution or the organic solvent prior to the formation of the PVAP-PVP complex, said drug being insoluble in the organic solvent, but soluble or suspendable in an alkaline solution and insoluble in aqueous acidic solutions; and adjusting the pH of the mixture to an acidic pH to form drug granules entrapped in the PVAP/PVP complex.

23. (Amended)

A method according to claim 19 wherein the pH of the aqueous alkaline mixture containing drug and PVAP/PVP complex is lowered to an acidic pH of less than about 4.

24. (Amended)

A method according to claim 23 wherein the pH of the aqueous alkaline mixture containing drug and PVAP/PVP complex is lowered to a pH of about 3 or below.

25. (Amended)

A method according to claim 19 wherein the pH of the aqueous alkaline mixture containing drug and PVAP/PVP complex is lowered with hydrochloric acid.

Please cancel claims 30 and 31.

32. (Amended)

A polymer complex for entrapping drug granules formed by the process of: combining polyvinyl acetate phthlate (PVAP) and polyvinylpyrrolidine (PVP) in a non-acidic medium selected from the group consisting of an aqueous alkaline solution and an organic solvent to form a PVAP-PVP complex,

adding a drug to the aqueous alkaline solution or the organic solvent prior to the formation of the PVAP-PVP complex, said drug being insoluble in the organic solvent, but soluble or suspendable in an alkaline solution and insoluble in aqueous acidic solutions; and adjusting the pH of the mixture to an acidic pH to form drug granules entrapped in the PVAP/PVP complex.

14 3\$. (Amended)

A polymer-entrapped drug comprising:

- a drug that is insoluble in organic solvent, but soluble or suspendable in an alkaline solution and insoluble in aqueous acidic solutions;
- said drug being entrapped in a complex of polyvinyl acetate phthlate (PVAP) and polyvinylpyrrolidine (PVP);
- said PVAP-PVP complex having bands at about 1657 cm⁻¹ and 1724 cm⁻¹ in the spectrum of the PVAP-PVP complex.

Please cancel claim 34.
